rowood™

Transform your bedroom...from a simple place

to sleep to an environment that adjusts to your lifestyle -

a haven for relaxing, reading a great novel, enjoying a

favorite show or catching up on work. [Röwa](#) – the perfect

combination of style and comfort – makes it all possible!

- The wired hand wand ensures your bed is ready to work when you are ready to relax.
- The only three motor adjustable sleep system in the United States that allows for the user to choose a “chaise lounge” position.
- The only bed in the United States to utilize “mains disconnect”, meaning no electrical current flows to the motors unless the hand wand is activated.
- With the use of the hand wand, [Röwa](#) lowers to the flat position if electrical power is lost.
- Three programmable positions on the hand wand ensure the sleeper of customized comfort, each and every time.

Röwa offers truly custom comfort that always supports and

adjusts with the correct amount of gentle posturising.

Engineered in lumbar support under the decking system

assures the consistent support your body needs.

Röwa is the first articulating

sleep system created by

designers and developed

by ergonomic specialists.

A sleek aluminum extruded frame gives Röwa the most unique appearance of any adjustable bed on the market.

The patented decking system allows for the use of a thinner profile mattress while giving you all the comfort of a thicker mattress.

To provide proper support and comfort, a mattress must work in harmony with its supporting surface. Röwa does this - beautifully.
